

CALL FOR PAPERS

**Division of Energy and Fuels (ENFL)
American Chemical Society**

**263rd ACS National Meeting & Exposition:
March 20-March 24, 2022 | San Diego, CA**

Submit abstracts at <http://maps.acs.org> by October 11, 2021

**Hydrocracking and Hydrotreating Processes and Catalysts for
Upgrading Renewable Oils, Residual Oils, Lube Base Stocks, and
Olefin Plant Feedstocks**

Nominal Cosponsors: CATL, ENVR

Hydrocracking and hydrotreating (together known as hydroprocessing) are the heart of modern refining. They are used for upgrading renewable oil, petroleum residue, lubricant base stocks, and feeds to petrochemical plants. Most new refinery investments include hydroprocessing. Areas of special interest include catalyst development, process development, feedstock characterization, reaction mechanisms, real-time optimization, and safety.

Organizers
